

Question 1

Assignment 3

The due date for submitting this assignment has passed. Due on 2020-02-19, 23:59 IST.
As per our records you have not submitted this assignment.

1) Which of the following displays a code which iterates from numbers 1 to 100, displays "fizz" if 1 point
the number is divisible by a but not b , displays
"buzz" if the number is divisible by b but not a and displays "fizzbuzz" if the number is divisible by
both a and b . a and b are
inputs taken from the user.

☐

```
1 a = int(input("Enter the value of a"))
2 b= int(input("Enter the value of b"))
3 for i in range(1,101):
4     if (i%a==0):
5         print(" fizz ")
6     if (i%b==0):
7         print(" buzz ")
8     else:
9         print(" fizzbuzz ")
```

☐

```
1 a = int(input("Enter the value of a"))
2 b= int(input("Enter the value of b"))
3 for i in range(1,101):
4     if (i%a==0):
5         if (i%b!=0):
6             print(" fizz ")
7     if (i%b==0):
8         if (i%a!=0):
9             print(" buzz ")
10    else:
11        print(" fizzbuzz ")
```

☐

```
1 a = int(input("Enter the value of a"))
2 b= int(input("Enter the value of b"))
3 for i in range(1,101):
4     if (i%a==0):
5         if (i%b!=0):
6             print(" fizz ")
7     if (i%b==0):
8         if (i%a!=0):
9             print(" buzz ")
10    else:
11        print(" fizzbuzz ")
```

```
1 a = int(input("Enter the value of a"))
2 b= int(input("Enter the value of b"))
3 for i in range(1,101):
4     if (i%a==0):
5         if (i%b!=0):
6             print("fizz")
7     else:
8         if (i%a!=0):
9             print("buzz")
10    else:
11        print("fizzbuzz")
```

No, the answer is incorrect.

- ☐ displays magic squares of size 2
- ☐ none of the above

No, the answer is incorrect.
Score: 0

Accepted Answers:

displays all 2×2 matrices where elements are from 1 to 9.

Question 3

3) Leap years are the years

1 point

1. which divisible by 4 but not divisible by 100, and, those
2. divisible by 400

Which of the following code does not represent a code displaying all the leap years from 1 to 2000.

```
1 d4=[]
2 d100=[]
3 d400=[]
4 for i in range(1,2001):
5     if (i%4==0):
6         d4.append(i)
7     if (i%100==0):
8         d100.append(i)
9     if (i%400==0):
10        d400.append(i)
11 ly=[]
12 for each in d4:
13     if each not in d100:
14         ly.append(each)
15 for each in d400:
16     ly.append(each)
17 print(ly)
```

```
1 ly=[]
2 for i in range(1,2001):
3     if(i%4==0):
4         if(i%100!=0):
5             ly.append(i)
6         else:
7             if(i%400==0):
8                 ly.append(i)
9 print(ly)
```

```
1 ly=[]
2 for i in range(1,2001):
3     if(i%400==0):
4         ly.append(i)
5     else:
6         if(i%4==0):
7             ly.append(i)
8 print(ly)
```

```
1 ly=[]
2 for i in range(1,2001):
3     if(i%400==0 or (i%100!=0 and i%4==0)):
4         ly.append(i)

```

Question 4

10) Assume a drunkard whose movement is defined on the number line, i.e. he can either move forward or backward. Assume he is standing at a position p . He takes 2 steps forward followed by 4 steps backward. He falls into the pit as soon as he steps on the position zero. Which of the following codes correctly represents his walk? A. **1 point**

☐

```
p = int(input())
while (p > 0):
    p = p + 2
    print("Location =", p)
    p = p - 4
    print("Location =", p)
print("Fell in pit at location ", p)
```

☐

```
p = int(input())
while (p > 0):
    p = p - 2
    print("Location =", p)
    p = p + 4
    print("Location =", p)
print("Fell in pit at location ", p)
```

☐

```
p = int(input())
while (p > 0):
    for i in range(2):
        p = p + 1
        print("Loc =", p)
```

```
        if ( p ==0):
            break
        for i in range ( 4 ) :
            p=p-1
            print ( " Loc = " , p )
            if ( p ==0):
                break
        print (" Fell in p i t at location " , p )
```

☐ none of these

No, the answer is incorrect.

Score: 0

Accepted Answers:

```
p= int ( input ( ) )
while ( p >0):
    for i in range ( 2 ) :
        p=p+1
        print ( " Loc = " , p )
        if ( p ==0):
            break
    for i in range ( 4 ) :
        p=p-1
        print ( " Loc = " , p )
        if ( p ==0):
            break
    print (" Fell in p i t at location " , p )
```

Question 5

1) What does the following code do?

```
1 import random
2 def get_gates () :
3     r=random . randint ( 0 , 2 )
4     r1=random . randint ( 0 , 2 )
5     while ( r == r1 ) :
6         r=random . randint ( 0 , 2 )
7     l = [ ' x ' , ' x ' , ' x ' ]
8     l [ r ] = ' c '
9     l [ r1 ] = ' c '
10    ind = [ 0 , 1 , 2 ]
11    for each in ind :
12        if ( each != r1 and each != r ) :
13            l [ each ] = ' g '
14    print ( l )
15
16 get_gates ()
```

- ☐ creates a list where two random elements are 'c' and the other element is 'g'
- ☐ creates a list where two random elements are 'g' and the other element is 'c'
- ☐ creates a list where one random elements is 'c' and the other element is 'g'

Question 16

The numbers of edges of complete graph having nodes as 1,2,3,4,5,6,7,8,9,10 is

Option A- 45 Option B- 90 Option C- 30 Option D- 60

According to me answer is 45 .reson is given below:

The total number of possible edges in a complete graph of N vertices can be given as,

$$\text{Total number of edges in a complete graph of } N \text{ vertices} = (n * (n - 1)) / 2$$

So, for 10 vertices we have $(10*9)/2=45$

Question 17

A code was given and the aim of the code was to check wheather we can use touple as key of dictionary

Ans Yes

If 570 candidates vote for 1000 then how much vote for 20,000?

- Option 1- 11400
- Option 2- 1140
- Option 3- 2000
- Option 4- 1000

Answer is 11400

Because $(570/1000) \times 20000 = 11400$

Question 21

If COMPUTER is PLAMETUSOV and SCIENCE is WMAOLEPTY, then what PYTHON is?

I CAN NOT REMEMBER THESE UNDERLINED WORDS AND OPTIONS GIVEN FOR THIS QUESTION

QUESTION 22

What does the following code do?

`Numpy.array([1,2,3,4])`

- Option 1- creates an array
- Option 2- shows syntax error

Option 3- none of these

Option 4- creates a tuple

ANSWER IS shows syntax error

```
>>> import numpy

>>> print(Numpy.array([1,2,3,4]))
Traceback (most recent call last):
  File "<pyshell#3>", line 1, in <module>
    print(Numpy.array([1,2,3,4]))
NameError: name 'Numpy' is not defined
>>> |
```

Question 23

There was a question like:

A function of barbelgraph was given and was asked how many nodes it will produce?

I can't remember that question code and options given for it

Question 24

The following pattern was given and was asked :

Choose the code required to produce this pattern

```
*
* *
* * *
* * * *
* * * * *
```

I can't remember the options

Question 25

What is the output of the following code?

```
import matplotlib.pyplot as plt
x=[1,2,3,4,5]
y=[1,4,9,16,25]
plt.plot(x,y,'ro')
plt.show()
```

options 1 ,2 and 3 are given below in 1 figure

option 4

Answer is option 4 (see the below images for proof)

Question 26(Scratch question)

Choose the scratch code for gling a ball:

I can't remember the options.

Question 27(Scratch question)

REPEAT N

ROTATE 18 DEGREE

Above red lines was written in scratch format

Question : For what value of n in the following code ,the spirit will do a complete rotation?

Option 1-30

Option 2-20

Option 3-10

Option 4-15

ACCORDING TO ME ANSWER IS 20 (BECAUSE $360/18=20$)

Question 28(Turtle question)

A turtle code was given .

Question :what is the output of the following code?

Option 1

Option2

Option 3

Option 4

1st thing ,I can not remember the turtle code given for it and I have doubt in option number 4

Question 29

A graph for a lottery was shown in which:

Y axis was Account money

X axis was Number of turns

Question : Will you gamble?

Option 1- Yes

Option 2- No

Option 3- can't tell

Option 4- None of these

Answer According to me ,the answer is No because data is insufficient

Question 30

What does the following code returns for positive and as well negative values of n?

```
def num(n):  
    if n>0:  
        return(-n)  
    else:  
        return(-n*-1)
```

Option 1- Absolute value of n

Option 2- Negative vale of n

Option 3- Absolute negative vale of n

Option 4- Same number

Answer Absolute negative value of n

Reason Let us consider two numbers one positive and the other negative that is 8 and -8. So for 8 $n = -|8| = -8$ and for -8 $n = -|-8| = -8$

Question 31

What does the following code do?

```
j="".join(random.sample(word,random.randint(0,len(word))))
```

Option 1- produces runtime error

Option 2- gives correct output for any length of the word

Option 3- may or may not gives output for any length of word

Option 4- prints nothing

Answer may or may not gives output for any length of word

```
joc.py - C:\Users\abhis\Desktop\joc.py (3.8.4)
File Edit Format Run Options Window Help

import random
word="apple"
j="".join(random.sample(word,random.randint(0,len(word))))
print(j)

Question 32

What is the output of the following code?

```
List=["hi","we","are","the","elements","in","the","list"]
print(List[-5:-1])
```

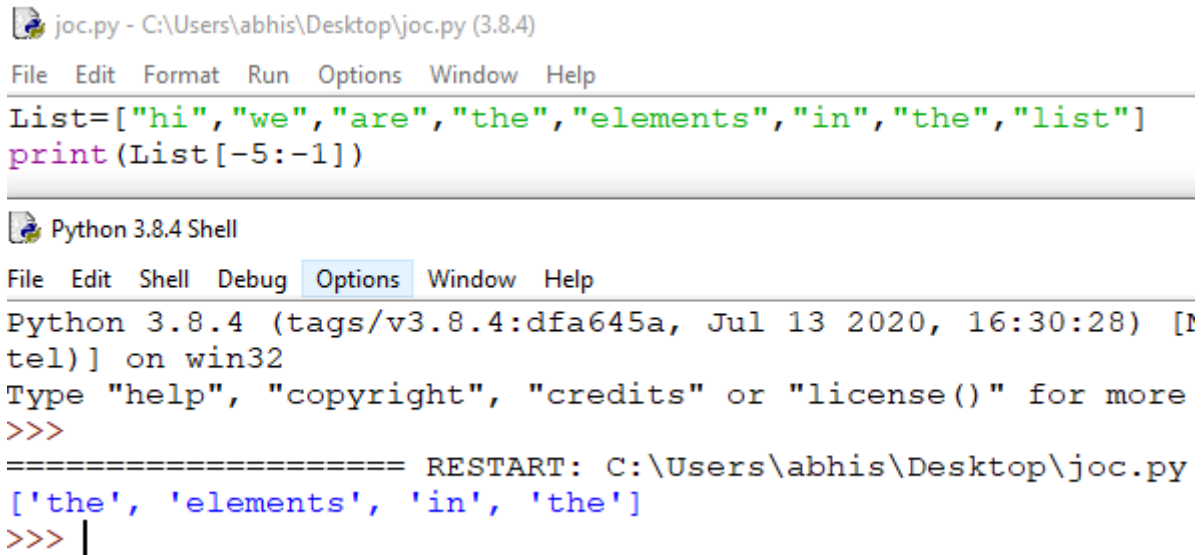

Option 1- ['the', 'elements', 'in', 'the']

Option 2- ['the', 'elements', 'in']

Option 3- []

Option 4- ['elements', 'in', 'the']

Answer ['the', 'elements', 'in', 'the']

```

Question 33

What is the output of the following code?

```
s="hello"
print(s.index('ells'))
```

- Option 1- 0
- Option 2- 1
- Option 3- error
- Option 4- 2

Answer error

```

Question 34

Everthing was same like below question just the string was changed

If GOLD is encoded as FNKC, then how is PLATINUM encoded?

- ☐ NKYRGLSK
- ☐ OKZSHMUL
- ☐ NJYRGLSK
- ☐ OKZSHMTL

Yes, the answer is correct.

Score: 1

Accepted Answers:

OKZSHMTL

THESE WERE THE QUESTIONS DURING FINAL CENTER EXAM OF JOY OF COMPUTING USING
PYTHON ON 13TH DECEMBER FROM 9 AM TO 12PM(MORNING SESSION)

Credits goes to my subscribers who discussed these questions

and

my memory of this exam

THANKS
